Reports can extract data from the API for automated generation of text, figures (maps, time series, etc) and tables in a variety of formats (html, pdf, docx). This is especially made possible with Rmarkdown (see 1 min video: What is R Markdown? on Vimeo).

This web page reports.**html** was rendered from reports.**Rmd** which can also be rendered in these other formats:

- Adobe: reports.**pdf**
- Word: reports.**docx**
